

Extend Asphalt Pavement Life by 40% with Polymer-modified, Penetrating Rejuvenator

BIORESTOR® Asphalt Rejuvenator is over 90% bio-based –  **Contract Holder** Contract GS-21F-132AA and USDA BioPreferred program – increases asphalt pavement life cycle by penetrating into hot mix surface and renewing the physical property characteristics of the pavement binder:

- Reduces surface aging, which reduces loss of fines, which reduces raveling
- Reduces surface cracking
- Increases pavement surface flexibility – reduces brittleness
- Retards air and moisture intrusion

Asphalt pavement rejuvenation is in greater demand today than ever before

Refinery technology has increased over the years, pulling more of the lighter ends, or “goodies” out of the crude oil, resulting in much lower quality liquid asphalt binders, thus making asphalt pavement surfaces much more vulnerable to air and moisture intrusion, UV damage, aging, increased traffic punishment, etc., etc. – all contributing to premature surface deterioration and failure.

Contact us to discuss more specifically how **Envirotx** and **BIORESTOR®** can stretch your pavement maintenance dollars. www.envirotx.com
